

Wash More Vehicles. Eliminate Length Limitations.

Petit Auto Wash Equipment now offers **extended-length travel options** for our in-bay systems—delivering **superior wash coverage for today's longest vehicles.**

The Accutrac® 360-i, available in all three wash heights (8', 8'4", and 9'10"), can be equipped with optional 2-foot or 4-foot extended rail kits to dramatically expand vehicle coverage.

*One of the longest production vehicle is the 2016 and newer Ford super duty pick up, measuring 18' 8".

To accommodate today's longest vehicles, up to 22' 2" in length, the comprehensive Accutrac 360-i software makes it easy. Operators can utilize built in "Park Window" adjustments to maximize the wash potential. By delaying the visual cue from the "Stop" light, customers simply park further past the initial photo eye while maintaining sufficient clearance to the "Backup" light. The result is smooth vehicle positioning and confidence washing long wheel base vehicles without sacrificing quality or throughput.

What Extended Rails Deliver:

- Wash vehicles up to 25'2" in length with 4-foot extended rails, even when parked in the least favorable position
- Wash vehicles up to 26'2" by adjusting the park window timer in Accu-View® software
- Ideal for long-bed pickups, extended SUVs, commercial vehicles, and specialty vehicles
- Retrofit kits available for existing installations

22'8" Sprinter Van

19'6" Funeral Limousine

18'8"

Compared to standard machines, Petit's Long Rail Kits feature taller rail profiles along with upgraded rail mounting brackets and e-chain rollers for enhanced strength and performance. Leg spacing for the 2-foot longer rails remains the same as standard installations, while the 4-foot longer rail option utilizes a different leg spacing configuration.

More Information

Don't forget about dually trucks:

Most dually trucks average approximately 96 inches wide. Our in-bay systems provides up to 112 inches of clearance at the vertical section of the spray arms when using high pressure, offering generous side clearance for standard dually trucks.
